

Dear Recruiter:

My name is Qishan Wu, an undergraduate in Computer Engineering from University Of California San Diego. The intent of this letter is to express my interest in available summer internship opportunity. I believe my academic background, problem-solving skill, communication skill, and internship experience would be an asset to your company.

First of all, I have strong academic background. I have been Provost honor in UCSD since 2013 and my current GPA is 3.83. My most familiar language is Java and I am currently a tutor in CSE department. My responsibility is to guide students with basic object-oriented programming. During the school time, I did a lot of team projects. For example, I customized a lot of games such as Rock-Paper-Scissor and Snake Game. I believe courses and projects in school prepare me well to go into the industry.

Besides the tutor work and projects, I also have many internships experiences. In summer 2016, I was a software summer intern in Cubic Transportation Systems and my work was to help the company build up an Android handheld ticket checker. During the internship, I worked independently in collaboration with my supervisor for three months on the project, which enhanced my self-learning and problem-solving skill. And during the internship, I learned how to communicate with people in different teams or departments. At the end of the internship, I presented the analysis of an idea to the management teams and showed them the plausibility of the project, and they decided to further investigate and possibly create a future product from it. Also in summer 2015, I did a summer internship in a local company called Bioinforx to help the company build up an online contact system. During the internship, my main responsibility is to build up the layout of the system using HTML, CSS, and frameworks such as Bootstrap. The reason I learned both the app and web development is that in the future I want to do cross-platform application development.

I believe eliciting input from others leads to an innovative ideas and effective solutions. Thus, I really enjoy cooperating with others on and off campus. For example, during the tutoring hour, I enjoy cooperating with other students, sharing ideas and solving problems together. And most of the projects I have done are team projects. Through these experiences, I gain a lot of hands-on experience on how to get on well with other people, how to communicate with others, and how to learn from others, which I think is the most important skills required for the industry.

As a candidate with a relatively strong academic background, communication skill, problems solving skill, and internship experience. I am confident that I could make a positive and productive contribution to the company. I look forward to hearing from you. Please feel free to contact me at henrywu573@gmail.com or 8589991129. Thank you for your time and attention. Following are the references you can talk to regarding me.

(My Mentor): raymond.chan@cubic.com

(My Supervisor): cjalvarado@eng.ucsd.edu

Sincerely

Qishan Wu
